Re: Business Process Analyst

Dear Hiring Manager,

Process governance is only as effective as the discipline behind it. I learned this firsthand managing a 7-million-record SAP data migration across six supply chain modules at Trident Group — coordinating cross-functional sign-offs, building automated validation workflows, and ensuring documentation remained accurate through every system-driven change. That project achieved a **35%** efficiency gain and earned me **Employee of the Year** recognition. I am applying for the Business Process Analyst role at Domino's because the position's focus on SOP governance, platform ownership, and standards adoption is precisely where this experience translates directly.

At Web Industries, I applied Lean Six Sigma DMAIC to formalize root cause analyses and standards reviews across 5 global aerospace facilities — structuring the documentation, facilitating cross-functional teams, and delivering recommendations that reduced cycle time by **25%** and improved on-time delivery by **68%**. Governing process content at scale, making it trusted by the people who use it daily, and tracking whether it is actually being adopted are disciplines I have practiced in high-stakes manufacturing environments. Domino's Supply Chain requires exactly that combination: rigorous documentation governance paired with the analytical instinct to measure and improve platform engagement over time.

On the analytics side, I have designed executive dashboards in Power BI and built supply chain models in SQL and Python that improved forecast accuracy by **35%** and cut inventory carrying costs by **18%** at Trident Group. Producing the adoption metrics, quarterly maturity checkpoints, and year-end impact summaries the BPA role requires is work I am well-positioned to own from day one.

What draws me to Domino's specifically is the opportunity to bring governance discipline to a system operating at genuine scale — 22,300+ stores, a global franchise network, and supply chain operations that touch frontline performance directly. I want my work to have that kind of leverage.

I would welcome the opportunity to discuss how my background in process governance, supply chain analytics, and cross-functional documentation can contribute to Domino's Supply Chain team. Thank you for your time and consideration.

Sincerely,

Hritik Kabra
